

Abstract of the Disclosure

A wheel upon which interchangeable components may be mounted to the change the appearance thereof, is provided. The wheel may include a base wheel skeleton including a rim, a hub and spokes. Each spoke may include threaded holes adjacent the rim. Additional threaded holes may be disposed generally around a periphery of the hub. A hub cap may be attachable to the wheel on a first side of the wheel and include mounting extensions for attachment of the hub cap to the threaded holes around hub. Skin elements may be attachable to the wheel and include holes for attachment of one end of the skin element to one of the threaded holes adjacent the connection of the spokes to the rim. The skin elements may further include an extension disposable under a portion of the hub cap for retention of another end of the skin element by the hub cap.
